We cannot wait any longer for a visible and dynamic response from the government, business and international community. We do not need any more reports to tell us what we already know - HIV/AIDS is killing 600 people a day in this country and ruining lives and hopes. But with will and commitment this does not have to happen. With leadership from business and government, together with labour and communities, it is still possible to save lives and restore hope. -- Zackie Achmat, Treatment Action Campaign, South Africa
